

Modern G+1 Family Residence

A complete design-to-construction concept for a modern family residence, planned for practical daily living, elegant elevation and efficient use of space.

Project Overview

Project Type	Turnkey Residential Construction
Residence	Modern G+1 Family Residence
Floors	Ground + First Floor
Architecture	Contemporary modern facade with warm material accents
Delivery	Design, structure, construction, MEP coordination and finishing

Turnkey Scope

- **Architecture:** floor planning, front elevation concept and working drawings.
- **Structural:** foundation, columns, beams, slab and staircase as per approved structural design.
- **Civil Construction:** masonry, plaster, waterproofing, flooring and associated site works.
- **Electrical:** concealed conduits, wiring points, switchboards and standard fixture provisions.
- **Plumbing:** water-supply and drainage lines, sanitary provisions and required service points.
- **Doors & Windows:** frames, shutters/windows and hardware as per selected specification.
- **Finishing:** putty, primer, paint, tiles, ceiling details and exterior finishes.

Design Highlights

- Clean G+1 contemporary elevation with strong horizontal and vertical forms.
- Balcony and terrace elements with glass/metal detailing and integrated greenery.
- Warm facade lighting for a premium evening appearance.
- Combination of neutral wall finishes, wood accents and textured stone surfaces.
- Covered parking, defined entrance and landscaped front setback.
- Large openings planned to improve daylight, ventilation and visual openness.

Typical Space Planning

Ground Floor	Parking / porch, living, dining, kitchen, bedroom/guest room, toilet, staircase and utility spaces.
First Floor	Family lounge, bedrooms, attached/common toilets, balcony, wardrobe/dress areas and terrace as required.

Project Process

Requirement & Site Study → Planning & Design → Estimate & Material Finalization → Structural & Civil Work → MEP Installation
→ Finishing → Quality Check & Handover

NOTE: Final room sizes, built-up area, materials, brands, structural specifications, project cost and completion timeline should be finalized according to the actual plot, soil/site conditions and client-approved scope.
